ELECTRICAL CONNECTION

Please disconnect the vehicle battery before installing or servicing your LED light installation. If in doubt, it is recommended to use the services of a professional installer. It is recommended to use the available corresponding Triple-R wiring kit for your product. If utilizing existing (non Triple-R) wiring, make sure to use the appropriate wire gauge and fusing in line with your lights.

Customers can connect the light to a positive battery feed, an ignition feed, or directly to the high-beam signal. When connected to the ignition feed, the light will only operate when the vehicle's ignition is turned on. Alternatively, for DOT/SAE-compliant lights, connecting directly to the high-beam signal will allow the light to operate in sync with your vehicle's high beams.

to the ignition feed, the light will only operate when the vehicle's ignition is turned on. Alternatively, for DOT/SAE-compliant connecting directly to the high-beam signal will allow the light to operate in sync with your vehicle's high beams.

LINEAR-18 ELITE+ / LINEAR-18 ELITE I-LBA

Please refer to the instructions that are included with the lamp.
